- Hard surface for easy cleaning
- Convenient Installation
- Compatible with All Standard Projectors
- Gain 0.8, +/-85° Half Gain
- Fill Color Balance within 180° Viewing Angle
- Curved screen available

The TWT-SI screen is made of advanced optical front projection surfaces. With high-contrast filter that absorbs ambient light, TWT-SI screens produce exceptionally clear images even in bright environments such as conference rooms, control rooms, shopping malls, convention centers and showrooms. The large size of TWT-SI rigid panel screen and the outstanding image quality of the optical projection can attract the attention of the audience no matter how far the distance is. The modular structure allows users to customize screens of any size and quantity, and assembling is quick and easy. With powerful magnets, the panels can be combined to achieve a complete and seamless visual treat, which is highly cost-effective. The screen uses soft edge fusion technology. There is no need to worry about visual image overlap when using multiple projectors for larger image and higher resolution.

Standard screens sizes:

Format	Spec	Viewing area(mm)	
		W	H
16:9	100"	2214	1245
	120"	2657	1494
